

Brine Make-up & Storage Systems

## Rental Briners

**The Need:** There are many valid reasons for rental vs. purchase. Sometimes, an immediate need cannot wait for production of your new briner and a rental unit is utilized to bridge the gap. You may have a short term requirement that simply does not warrant investment into a permanent solution. Sometimes, budgetary constraints are resolved with a rental unit.

**The Solution:** After having received many requests for a rental unit, we have responded with a fleet of rugged, full-feature 35 ton capacity poly briners that are delivered ready for service. Included are all of our standard features plus our “plug and play” Water Level Control System.

After taking delivery of your briner, a few piping connections and an electrical connection are all that is required ... now you're ready to take your first bulk salt delivery and start making brine.

When renting makes more sense, call BrineMaker

Our 35 ton rental unit has a 10' Ø footprint and is 16' tall. Salt is pneumatically loaded via a 4" SS fill line which has a quick connect for standard hose connection. If bulk salt is not available in your area and you plan on loading the briner with bulk bags, we can provide a “loading chute” to replace the standard manway cover. Our rental unit has all the features of a permanent briner and we can provide the gravel bed too. If you would like to learn more about renting, please contact our office for a copy of our Rental Agreement.
